

EfficientIP Maintains Technological Leadership With SOLIDserver™ 6.0

PARIS -- June 1, 2016 -- EfficientIP - a leading developer of DDI solutions (DNS, DHCP services, VLAN and IP-address management) - today announced the availability of SOLIDserver™ 6.0, a new interface for managing large IP networks, which brings the benefits of DNS Guardian security to the enterprise market.

To handle the fast-growing number of IP addresses with IoT, cloud and virtualization projects, companies need to execute the most effective and secure performing network services. The lifecycle management of so many addresses is putting pressure on network teams, who need reliable tools to set, manage and monitor their services.

SOLIDserver 6.0 integrates an intuitive, modern and fast user interface to manage large IP networks, alongside the most powerful functions available on the market. This latest version of EfficientIP's appliance suite uses technology designed to deliver scalable, robust and secure solutions for the next wave of virtual and hardware DDI product.

The product has been optimized and improved to ensure the best user experience when managing large sets of IP addresses. Customers will benefit from an effective management system, and a DDI solution that supports business agility and prevents new services from experiencing loss of service. It also brings an evolutionary architecture that ensures efficient future development of EfficientIP's current SOLIDserver offering. The enhanced product is also introducing the DNS Guardian adaptive security functionalities to the enterprise market. DNS Guardian is now available from SDS 5500 to SDS 1100 appliance models.

David Williamson, CEO of EfficientIP, said, "The SOLIDserver unified management framework for DNS, DHCP & IPAM devices is recognized by the market as the most powerful and user friendly solution. With version 6.0 we are aiming to increase the gap between what we can offer in comparison to our competitor - who still has issues with aging technology in managing the amount of IP addresses."

He added, "We are proud to deliver this new version of SOLIDserver to our customers and partners to help them to stay one step ahead of their competitors."

To help network teams monitor device configuration, SOLIDserver allows users to automatically save and archive routers and switches configurations. The management console provides the possibility to retrieve the configurations of a specific date or to compare configurations set on different dates or devices.

Additional new SOLIDserver 6.0 functions, features and benefits include:

- GUI refactoring (CanJS + HTML5 Server Sent) for a faster user experience
- IPAM refactoring to centrally support numerous IP addresses
- Class parameters heritage for easier configuration
- Unique advanced DNS statistics with DNS Guardian trademark technology
- More DHCP statistics for faster management
- Integration of GSS-TSIG for better security
- The dynamic update of attributes inherited from a parent class
- Better visibility of DNS activity for simplified troubleshooting and better monitoring of the platform
- Ability to view and export statistics on DNS queries processed in a configurable interval

ABOUT EFFICIENTIP

As one of the world's fastest growing DDI vendors, EfficientIP helps organizations drive business efficiency through agile, secure and reliable network infrastructures. Our unified management framework for DNS-DHCP-IPAM (DDI) and network configurations ensures end-to-end visibility, consistency control and advanced automation. Additionally, our unique 360° DNS security solution protects data confidentiality and application access from anywhere at any time. Companies rely on us to help control the risks and reduce the complexity of challenges they face with modern key IT initiatives such as cloud applications, virtualization, and mobility.

Institutions across a variety of industries and government sectors worldwide rely on our offerings to assure business continuity, reduce operating costs and increase the management efficiency of their network and security teams. For further information, please visit: www.efficientip.com
