

WHO WE ARE WHAT WE DO OUR MISSION

As one of the world's fastest growing DDI (DNS-DHCP-IPAM) vendors, EfficientIP helps organizations drive business efficiency through agile, secure and reliable network infrastructures.

We deliver a unified management framework for DDI and network configurations, providing end-to-end visibility, consistency control and advanced automation across networks and cloud landscapes- public, private and hybrid.

We empower organizations to overcome the challenge of IT orchestration with flexible, scalable and open technologies, enabling easy and fast integration for end-to-end management process automation. Our unique 360° DNS security solution protects data confidentiality and application access from anywhere at any time against the growing threats of malware, APT and cyber attacks.

We Support Strategic IT Initiatives & Security Challenges

Business is moving faster than ever, fueled by the needs of new and innovative offers, quick company reorganization and operational efficiency improvements for costs reduction. At the same time, security is at the front line of vital challenges that every company meets to ensure business continuity, preserve brand reputation and protect customer data and intellectual property. In this highly competitive context, modern network infrastructures are a cornerstone of key IT transformation initiatives such as cloud and virtualization, advanced orchestration, mobility, and IoT. DDI is a foundation of the IP infrastructure upon which these IT initiatives rest, ensuring user access to the network and business applications. Only by understanding these demands and managing these DDI components properly can enterprises ensure — and enhance — the efficiency, security and continuity of their IT and business operations.

We are Trusted by Over 1000 Customers

Our customers range from small and medium-sized organizations to large enterprises, coming worldwide from multiple industries including Bank and Insurance, Retail, Public Sector, Telco and Software companies. More than 1000 customers rely on us to help control the risks and reduce the complexity of challenges they face with modern key IT initiatives and assure business continuity, reduce operating costs and increase the management efficiency of their network and security teams.

Our Solutions

DNS Security for Business Continuity and Data Protection

EfficientIP solutions offer a specialized layer of in-depth defense to fill the gaps left by traditional security systems. Our 360° DNS Security provides a holistic approach to protect public and private DNS infrastructures from both internal and external DNS threats, regardless of the attack type. Unique in the market, our patented innovations offer an unmatched level of DNS security to protect your mission-critical services:

- DNS Guardian: ensure service continuity and protect against DNS data exfiltration thanks to real time threat detection based on user behavior analytics and DNS Transaction Inspection (DTI technology).
- DNS Blast: absorb extreme DDoS attacks and block weak-signal threats with the world's fastest DNS server (up to 17 million DNS queries per second) embedding the most advanced security features.
- DNS Firewall and Threat Intelligence Services: protect users and block DNS-based malware activity with advanced threat intelligence services for up-to-date layer of defense against ever-evolving malicious domains.
- DNS Cloud: secure your Internet visibility with highly resilient cloud-based public DNS services and unify management across your hybrid landscape.
- SOLIDserver™ DNS Hybrid Engine: mitigate zero-day vulnerabilities and eliminate single point of failure with 2 different DNS engines embedded in one appliance.

Smart DDI for Reliable and Agile Network Foundations

EfficientIP's Smart DDI solution offers integrated management of DNS-DHCP-IPAM and VLANs-VRF with devices and their network interfaces in a single process. Thanks to SmartArchitecture™, we bring a brand new approach to managing multi-vendor DNS and DHCP services at the architecture level (Microsoft, ISC BIND & DHCP, SOLIDserver). This unique comprehensive DDI solution delivers high availability, elastic scalability and advanced security, all built on policy-driven management and automation. As a result, it takes management efficiency to the next level with 80% time saving for fast ROI (up to 283% - 7 month payback period). SOLIDserver™ Smart DDI technology ensures that your network infrastructure foundations will actively support your business imperatives and growth.

DDI Orchestration for Advanced Cloud Automation

SOLIDserver™ appliance suite helps enterprises to transition smoothly from traditional IT to cloud-based infrastructures and services. Advanced integration with leading cloud orchestrators enables automated provisioning and deprovisioning of IP resources such as IP addresses and DNS services. Policy-driven deployments based on customized parameters enable alignment with corporate processes and IT environment.

Network Automation for Visibility, Availability and Cost Reduction

NetChange solution offers organizations advanced discovery and automated configuration of networks across all of physical and virtual platforms. It provides global visibility, centralized management and consolidated reporting over multi-vendor networks. Network automation eliminates manual error-prone and labor-intensive tasks in order to boost productivity, improve operational efficiency and reduce costs.

Innovation is in our DNA

EfficientIP is committed to thinking differently about the DDI industry- innovation is in our DNA. Our goal is to create value and efficiency for our customers through heightened security, advanced automation, and greater simplicity. We have launched unique features like network reconciliation management, which have today become market best practice standards.

We invented the advanced SmartArchitecture™ concept, which elevated the management of DNS and DHCP from service level to architecture level. EfficientIP is the world's first DDI vendor to have released patented and award-winning innovation features to secure against threats to the DNS infrastructure.

Technological Alliances & Ecosystem

EfficientIP has developed alliances with industry leading companies, ensuring the state-of-the-art standard and utmost compatibility of its technology with that of its partners. This allows EfficientIP solutions to run as smoothly and effortlessly as possible, intelligently connected to the IT infrastructures, strengthening network infrastructures' security, reliability and agility and significantly saving time while decreasing operational costs.

EfficientIP has integrated its products with an ecosystem of best-of-breed vendors including: Cisco, Splunk, Amazon, Microsoft, Google, VMware, OpenStack, HP Aruba, ServiceNow, Red Hat and Thales.

REV: C-221006

As one of the world's fastest growing DDI vendors, EfficientIP helps organizations drive business efficiency through agile, secure and reliable network infrastructures. Our unified management framework for DNS-DHCP-IPAM (DDI) and network configurations ensures end-to-end visibility, consistency control and advanced automation. Additionally, our unique 360° DNS security solution protects data confidentiality and application access from anywhere at any time. Companies rely on us to help control the risks and reduce the complexity of challenges they face with modern key IT initiatives such as cloud applications, virtualization, and mobility. Institutions across a variety of industries and government sectors worldwide rely on our offerings to assure business continuity, reduce operating costs and increase the management efficiency of their network and security teams.
