

EfficientIP SOLIDserver DDI and Tufin SecureTrack Join Forces to Provide Automated Security Compliance

Complementary technologies unite to simplify and control network security policies

PHILADELPHIA, PA -- May 21, 2019 -- EfficientIP, a leading provider of network security and automation solutions specializing in DDI (DNS-DHCP-IPAM), has announced its alliance and new integration with Tufin (NYSE: TUFN), a company pioneering a policy-centric approach to security and IT operations. The combination of each company's technologies creates a leading solution for security automation and compliance auditing activities.

The Tufin SecureTrackTM product is a complete firewall and security policy management solution for multi-vendor and next-gen firewalls, and cloud platforms. The SOLIDserverTM DDI appliance from EfficientIP simplifies and automates the management of DNS, DHCP, and IP Address Management (IPAM) from a single pane of glass. SOLIDserver's IP Plan data contains the «Golden Records» (technical and organizational information) which enable the creation and update of security policy zones. Integration between these platforms accelerates the deployment of security policy in virtualized environments, as well as on-premise, and most importantly to ensure compliance with both internal and external regulations.

"We are pleased to partner with EfficientIP to deliver innovative solutions that control and orchestrate network policy throughout the IT environment," said Pamela Cyr, Senior Vice President of Business Development, Tufin. "The result is a more secure, agile network, that complies with internal and external regulations."

The key benefits of the combined solution are numerous, including the ability to:

- Create accurate and environmental-aware zones
- Reduce management complexity
- Lower risk of misconfigurations
- Reduce labor through automatic synchronization of zone memberships

Jean-Yves Bisiaux, EfficientIP CTO noted, "We are extremely pleased to have entered into a technological alliance with a leader like Tufin. Network modernization is driven by the need for velocity, simplicity and security. Our complementary offering provides just this- it creates a best-of-breed solution for controlling and automatically deploying firewall rules throughout a company's infrastructure, on-prem or in the cloud."

TECHNICAL DETAILS

SOLIDserver DDI has been designed as an event-driven solution which is able to inform the IP ecosystem of any changes in real time. With a plug and play extension pack, SOLIDserver is able to notify Tufin SecureTrack of any changes on the subnet zone association so that it can rapidly update the compliance information (e.g. zone) associated with the subnet. Furthermore, almost any operation performed either through the IP address management web interface or through EfficientIP's APIs can trigger a notification event to Tufin. The integration enables many other possible uses for simplifying deployment and maintenance of security rules across hybrid environments.

The new integration is available for SOLIDserver Release 6 onwards, and Tufin SecureTrack.

About Tufin:

Tufin (NYSE: TUFN) simplifies management of some of the largest, most complex networks in the world, consisting of thousands of firewall and network devices and emerging hybrid cloud infrastructures. Enterprises select the company's Tufin Orchestration SuiteTM to increase agility in the face of ever-changing business demands while maintaining a robust security posture. The Suite reduces the attack surface and meets the need for greater visibility into secure and reliable application connectivity. With over 2000 customers since our inception, Tufin's network security automation enables enterprises to implement changes in minutes instead of days, while improving their security posture and business agility.

ABOUT EFFICIENTIP

EfficientIP is a network automation and security company, specializing in DNS-DHCP-IPAM solutions (DDI), with the goal of helping organizations worldwide drive business efficiency through agile, secure and reliable infrastructure foundations. We enable IP communication and simplify network management with end-to-end visibility and smart automation, while our patented technology secures DNS services to safeguard data and ensure application access. Companies in all sectors rely on our offerings to face the challenges of key IT initiatives such as cloud applications and mobility.
